## INTRODUCTION

### **“SHEETMETAL SPECIALS ARE OUR SPECIALITY”**

Excessive noise generated due to products being made from a metal gauge that is “Too Thin” for its application is common in our industry. At Westaflex we believe in making metal products “Fit for their intended purpose” and thus we specify the metal gauge we use on all our standard products. If you require specialised products with thicker or thinner metal than our standard please ask for a quote.

Our standard sheet metal products are produced using a CNC controlled plasma cutter, ensuring precise consistent standard components time after time.

Specialised sheet metal fabrication from oval fittings to multiple lengths of 50mm internally lined solid ducting can be designed and manufactured to suit your requirements. For fast turnarounds and quality workmanship, give us a call.

To incorporate the widely varied requirements of installation throughout Australia, Westaflex – Uniflex group produce well over one hundred standard different Branch Take Off (BTO) and Double Branch Take Off (DBTO) and “Y” Piece combinations in metal and poly.

Out BTO's, DBTO's and “Y”'s have been produced with the installer in mind. Robust with plenty of room to pull a full roll of duct tape around the branches and one way positive lock duct tabs on all products.

All prices **DO NOT** include GST.
